JAY KEER

Software Developer

Mumbai, India | +91 8806435774 | keerjar@gmail.com | linkedin.com/in/jay-keer-0ba889200 | github.com/[add-your-handle]

SUMMARY

I am a mobile application developer with 2+ years of experience shipping production Flutter apps for connected consumer products. My work spans cross-platform interface development, real-time and REST backend integration, and tuning connectivity for battery life and latency. I am currently pursuing an M.S. in Computer Science at Georgia Tech, specialising in Artificial Intelligence.

TECHNICAL SKILLS

- **Languages:** Dart, Python, C++, Kotlin, JavaScript
- **Mobile:** Flutter, Android (Kotlin), cross-platform application development, Google Play Console release management
- **Backend, Web & Cloud:** Node.js, REST APIs, React.js, MERN stack, Docker, Linux, IBM Cloud
- **Tools:** Git, GitHub, version control workflows

WORK EXPERIENCE

Assistant Manager, Product Design Engineer — Godrej & Boyce Mfg. Ltd. **Aug 2024 – Present**

Mumbai, India

- Introduced and established Flutter as the multi-platform framework for prototype testing across product teams.
- Improved BLE SDK logic by implementing scan filters, increasing battery life by 180% with no impact on response time.
- Led and developed “Godrej HOME”, a one-stop home automation platform for controlling Godrej and third-party home accessories, delivered primarily for iOS.
- Implemented client-side WebRTC streaming, enabling real-time video with 20 ms latency across local and global streams.

Software Developer — Drona Aviation **Sept 2023 – Jan 2024**

Mumbai, India

- Developed a fully functional remote flight controller over the UDP protocol, simulating remote flight-control capability across the internet for trial runs and mockups.
- Developed and deployed a chat-bot on the official website using IBM Watson Assistant, trained to handle FAQs, small talk, and classified questioning.
- Delivered workshops and demonstrations on the growing landscape of drone technologies and the video-streaming dependencies of remote control.

PROJECTS

Budgetify — Personal Finance & Expense Manager **Live on Google Play**

- Designed, built, and shipped a Flutter personal-finance app solo, from concept through closed testing to a public Google Play listing.
- Delivered spending reports, recurring transactions, and category budgets with alerts, wrapped in gamification mechanics that conventional expense trackers lack.
- Modelled India’s old income-tax regime as slab-based buckets for liability estimates; runs fully offline with all data stored on-device.

EDUCATION

M.S. in Computer Science — Georgia Institute of Technology **Aug 2026 – Aug 2028 (Expected)**

Specialisation in Artificial Intelligence

- **Relevant coursework:** Software Engineering Processes, System Architecture Design, Artificial Intelligence, Computer Vision, Deep Learning, Computer Networks.

B.E. in Electronics and Telecommunication Engineering — Vidyalankar Institute of Technology **July 2020 – May 2024**

Specialisation in Artificial Intelligence and Machine Learning.

- Major project: Autonomous vehicle for mapping using SLAM (Simultaneous Localisation and Mapping) with LIDAR; built a Node.js web app for real-time visualisation.

LEADERSHIP & VOLUNTEERING

TechWeb Head — IEEE Student Branch, Vidyalankar Institute of Technology **Aug 2021 – Aug 2023**

- Led a team of 12 undergraduates providing end-to-end technical support throughout the tenure.
- Implemented automations in Python that eliminated repetitive clerical work such as mailing and certificate distribution.
- Maintained the IEEE-VIT official website built on React.js, sustaining 99.99% uptime and keeping content current.
- Led “The Power of CLI” workshop for 100+ attendees covering terminal fundamentals and shell navigation, including a logic-driven Tic-Tac-Toe game built purely with terminal scripting.
